

Bioinformatics Hub: Special interest topic on Quality control

MATHIAS WALZER

Bioinformatics related to Quality Control

What the background of the session?

Grow the collection of QC metrics and related terms to establish a well communicable representation of quality that facilitates unambiguous report/discussion and seamless applicability with visualisation and reporting methods

What is the aim of a session?

- * introduce the work of the HUPO-PSI QC-dev group
- * learn about other MO for QC in LCMS acquisition and analysis
- * subsequently extend the already existing collection of metrics

What can you expect of it?

Get your QC procedures represented and ready for use with new QC tools and visualisations.
